

👋 Week 7 Discussion: Survey Tools (Make 3 or more posts to this topic for full credit)
1st post due by Wednesday

*All discussions run from Monday to Sunday

For this discussion, you will create a survey using an online survey tool of your choice.

This can be ANY free online survey. **Create a survey with 3 to 6 questions.** The topic is up to you! This can be as simple as favorite colors, favorite foods or even travel destinations. This is to PRACTICE making a survey, I am not concerned with the topic. While making this, think about how you might use these surveys in your own teaching.

If you are familiar with one survey please pick something different. I want you to try something new :)

1. Please survey your classmates by Wednesday.
2. Post the link to your survey on this discussion board by Wednesday.
3. By Sunday, please post a short paragraph about your findings. Was this easy to do? Will you consider using it in your classroom? How could you use surveys in your class?

I used SurveyMonkey for my survey - Course Evaluation Survey

<https://www.surveymonkey.com/r/ZZJ8FZT>

I had never used SurveyMonkey before. I found it to be simple to use but I felt a little limited with some of the features, especially with the free version, although I have not used other surveys. Yes, I would consider using it in the classroom to obtain feedback from students about the course to evaluate instructor performance, student satisfaction, and topics of interest. I would like to explore other survey apps, especially Google Surveys as mentioned in the Discussion notes.

The submissions for this assignment are posts in the assignment's discussion. Below are the discussion posts for Earle Oda, or you can [view the full discussion](#).

Hi Elizabeth - that's a good idea to use the survey as a self-introduction tool. Getting to know the students and their background will help the instructor. I can see myself using it to ask more questions about their background, maybe their level of English, their English training, etc.

Hi Meary,

I applaud you for trying something other than SurveyMonkey, which almost everybody chose (including me). A Google survey makes a lot of sense and to your point, it's convenient if you use Google for other things. I also like your idea about using a survey app to learn about student goals, background, and interests. Others have opted for using the survey in this manner. I plan to use a survey app in this way in my teaching.

Thank you!

Hi Sooeem - nice job on the survey. It shows that Google Forms is a viable option. I like the way you can tailor questions to have multiple selections or only one choice. I will definitely give it a try in my teaching. Thank you.
